Less Is More®

Trigger•Flex® Quad Pro

Essential for Endoscopically Assisted Spine Fusion

- Articulating Quad Bipolar Tips Manage Larger Areas of Tissue
- Unparalleled Surgical Precision with the Surgi-Max® Ultra
- Quick and Efficient Treatment of a Variety of Soft Tissue
- Safe and Precise Nucleus Ablation and Coagulation
- Ergonomic Hybrid Handle offers more control
- Compatible with Most Spine Scopes
- Sterile, Single Use

Our Technology...See The **elliquence** Difference

elliquence® has manufactured innovative radiofrequency systems and electrodes since 1959. The Trigger-Flex® handpiece combined with the Surgi-Max® High Frequency Radiowaves is designed for minimally invasive procedures such as endoscopic spine surgery. While laser and most electro-surgical devices are heat driven and imprecise, the Surgi-Max® provides unparalleled surgical precision at a much lower temperature allowing it to gently target tissue with minimal damage to surrounding healthy tissue.

Trigger-Flex® Quad Pro

Essential for Endoscopically Assisted Spine Fusion

Used exclusively with
Surgi-Max® Radio wave Technology

Articulating Quad Tip Provides Large
Surface Area to Manage Tissue

Low Heat Temperatures allow minimal
damage to surrounding tissue

Product Information and Codes

DTFQM-31: Working Length: 31cm

Compatible with 4.3mm working channel endoscopes

Sterile, Single Use
